Personal Mailbox

Security-conscious printing
made simple

PERSONAL MAILBOX

With Personal Mailbox you can manage all your sensitive document output with complete confidence.

Effortlessly manage your print security with Personal Mailbox

If your organisation needs to provide accessible print output to staff, but is concerned about document security, Personal Mailbox gives you a unique solution.

By installing Personal Mailbox on our latest multi functional devices, users can access their output at the device, using their standard company sign-on information. Simple to implement and use, Personal Mailbox perfectly balances effective security control with quick user-access and management of printed documents.

Access with ease

There's no searching for access cards or writing PIN codes on the back of your hand with Personal Mailbox. All access to the Canon print device is made using the same company sign-on protocols used every day, so access to the printer and PC is managed in exactly the same way. And that means it's easy to remember with no learning curve for users, saving time and effort.

Flexible to use

At the printer, users simply select the relevant Personal Mailbox, enter their password and then manage their document output. So confidential, and sensitive documents can be previewed, printed or deleted – it's really that simple. Security protocols ensure that users can only access their own individual output. And as documents can only be printed after logging-in at the device, documents are printed on demand, reducing wastage and ensuring machines aren't surrounded by output awaiting collection.

Enhanced control for IT managers

Personal Mailbox utilises Secure Sign On (SSO), allowing IT departments to set-up users in minutes. And as sign-on information is automatically authenticated with the Active Directory (AD) server, all changes to user information are automatically replicated to the Canon print device, making ongoing maintenance quick and carefully controllable by the IT department. Not only that, but new employees can be added effortlessly and remotely via the same IT process as other SSO systems.

Working to meet your needs

Canon has introduced MEAP (Multi functional Embedded Application Platform) to enable bespoke office applications to be made available to Canon's iR multifunctional devices. Personal Mailbox is an example of this forward thinking approach to our business. Developed specifically to address the security concerns of a major customer, it has now been further developed, so that all our customers with MEAP-enabled devices can benefit too.

Customised to your requirements

There's no need to worry about Personal Mailbox looking unfamiliar to your users. The application has been developed to allow it to be customisable, so that the user interface can be designed to match the user interface in your other SSO systems.
